TRANSLITERATION OF CYRILLIC

Since 1983 Mathematical Reviews (MR) and the American Mathematical Society use the system for transliteration (romanization) of Cyrillic given below. This system is largely in agreement with other transliteration systems in use in the U.S.A., such as those of the American National Standards Institute (ANSI), the U.S. Library of Congress (LC), and the Institute for Scientific Information (ISI). The principal feature of these systems is that they are intended to be as phonetic as possible for speakers of English.

The table below lists all Cyrillic letters occurring in Slavic languages, and the transliteration schemes used by:

Mathematical Reviews (= MR) (new),
Zentralblatt für Mathematik (= Zbl) (new),
MR and Zbl (old),
American National Standards Institute (= ANSI),
U.S. Library of Congress (= LC),
Institute for Scientific Information (= ISI).

The transliteration of the British Standards Institute (= BSI) agrees with that of ISI, except for the letters *ë* and *я* → *ÿ*.

In the schemes of some of these enterprises, a few Cyrillic letters receive more than one transliteration, depending on the language in which the letter occurs. Non-Russian Cyrillic letters and transliterations different from the one for Russian are identified by superscript numbers:

- | | |
|---|-------------|
| 1 | Ukrainian |
| 2 | Belorussian |
| 3 | Serbian |
| 4 | Macedonian |
| 5 | Bulgarian. |

In order to achieve complete reversibility of the transliteration scheme, centered dots are used as a separating or bracketing device, in the following cases:

тс → t·s, тш → t·sh, шч → sh·ch, уу → y·u, уа → y·a, дж → d·j, лј → l·j, нј → n·j, for separation, and џ → dzh· for bracketing.

Alphabetization (in indexes, etc.) takes place following the "stripped" version (i.e., without diacritical marks) of the transliteration; the symbol " (double prime) representing ъ is kept in the stripped version and placed at the head of the alphabet (the single prime representing ь is ignored). The capital version of the Bulgarian " is distinguished by an underbar: "̄.

Author Institution Codes and Addresses

Some items in Mathematical Reviews and Current Mathematical Publications (CMP) include author institution address codes. It is not feasible to code all institutions, and a code is assigned only for articles which have an author address coinciding with one of the institutions we have coded. A cumulative supplement to this list appears in each issue of CMP. A revised list is planned for the 1985 annual index.
